

Educating Future Generations about the Importance of Agronomy

April Jones*, The University of Tennessee at Martin

World Soils Day

World Soil's Day was December 5. The UTM Agronomy Chapter had different activity booths at Discovery Park of America. At each booth there were at least two members who facilitated the activities. The activities included soil texture, pH testing, and soil infiltration.

Earth Day

Earth Day was April 22. The UTM Agronomy Club chapter celebrated the day at Discovery Park of America. On this day we helped with several booths. These included soil painting and agricultural trivia questions for elementary, intermediate, and advanced levels. Participants could make their own seed germination necklaces to wear and watch grow. The local USDA-NRCS brought out the rainfall simulator to demonstrate the effects of soil erosion.

Soybean Festival

The Soybean Festival is held in Weakley County every September. This year the UTM Agronomy Club chapter had the pleasure of having a booth in downtown Martin, TN. At the booth we made soybean necklaces and soil painting. We also helped educate people about renewable energy at the energy trailer.
