

Putting Biological Nitrogen Fixation to work for smallholder farmers in Africa: The N2Africa project example

Fred Kanampiu^{1*}, Theresa Ampadu-Boakye¹, Edward Baars², Bernard Vanlauwe¹ and Ken Giller³

Our Work and Research

Enhance yield for improved incomes, food and nutrition security to smallholder farmers

Boost soil fertility and quality through legume nitrogen fixation and available technologies

Increase productivity of legumes (soybean, cowpea, groundnut, common bean, chickpea and faba bean.)

Long-term partnerships for sustainable legume value chain for smallholder farmers to benefit from symbiotic BNF

Our Achievements

Built capacity of over 30,000 partners to sustain delivery legume technologies

Supported 50 students in formal training

Reached more than 370,000 smallholder farmers with knowledge on best agronomic practices, improved legume varieties, fertilizers and inoculants

We have 19,690 farmers active in collective marketing and value addition activities

PPPs as delivery mechanisms for sustainability

Our Outputs

High yielding & farmer preferred legume varieties

We have developed blended legume P-fertilizers

Bio-fertilizers and facilities for production and quality control established e.g. Biofix, Nodumax

sustained value chain actor relationships through PPPs

Access to input channels at last mile

N2Africa is a project funded by the Bill & Melinda Gates Foundation by a grant to Plant Production Systems, Wageningen University and Research Center which leads the project together with International Institute of Tropical Agriculture, International Livestock Research Institute and many National partners in sub-Saharan Africa
